

AMENDMENTS TO THE CLAIMS

Claim 1 (Currently Amended) An artificial stone wall material comprising:

an inorganic fine particle component having a size ~~in the range of 180 µm to 9.5 mm;~~ and

an inorganic finer particle component having a size ~~in the range of less than 180 µm;~~ and

a resin component, ~~containing~~

wherein:

~~5 wt% or more of the inorganic fine particle component is a transparent inorganic fine particle component as said inorganic fine particle component, having:~~

~~the inorganic fine particle component, the inorganic finer particle component, and the resin component form a concavo-convex surface wherein having a maximum height between concavity and convexity ranging from ranges 1-5 mm to 100 mm, by being molded and solidified into a shape of a plate or a deformed shape; and wherein~~

~~at least a portion of both the transparent inorganic fine particle component, which is exposed on the surface thereof, and a shape of the concavo-convex surface; and~~

~~the exposed transparent inorganic fine particle component provides the concavo-convex surface are studded with sparkling points which change based on with irradiation manner a level of radiation and movement of natural light or artificial light.~~

Claim 2 (Currently Amended) The artificial stone wall material according to claim 1, wherein:

the inorganic fine particle component, except for the transparent inorganic fine particle component, ~~includes~~ is particles, of one or more kinds ~~of particles~~ [,] obtained by (i) crushing and screening natural stones ~~such as~~ including granite and marble, ~~an and~~ a molded product including such as a tile; , or (ii) ~~by~~ screening sands having rounded surfaces including such as a river sand and a sea sand [,]; and

~~the transparent inorganic fine particle component contained in content of 5 wt% or more in the inorganic fine particle component is~~ includes particles, ~~made~~ of one or

more kinds of particles, each particle having with achromatic transparency or chromatic transparency, including such as quartz stone, glass, garnet, or amethyst and the like.

Claim 3 (Previously Presented) The artificial stone wall material according to claim 1, wherein at least part of the inorganic finer particle component is a luminescent material or a fluorescent material.

Claim 4 (Currently Amended) The artificial stone wall material according to claim 3, wherein the luminescent material or the fluorescent material is (i) sintered into a surface of ~~particle~~ of the transparent inorganic fine particle component, or (ii) covered onto the transparent inorganic fine particle component thereon together with a ~~and the resin component~~.

Claim 5 (Currently Amended) The artificial stone wall material according to claim 14, 1, wherein at least part of the inorganic fine particle component includes particles ~~having a size in the range of 180 µm to 9.5 mm~~, obtained by crushing an artificial stone which is manufactured by molding and solidifying a mixture of (i) the an inorganic fine particle component having a size ~~in the~~ range of 180 µm to 9.5 mm, (ii) the an inorganic finer particle component having a size ~~in the~~ range of less than 180 µm, and (iii) the resin component.

Claim 6 (Currently Amended) The artificial stone wall material according to claim 5, wherein the artificial stone crushed into particles ~~having a size in the range of 180 µm to 9.5 mm~~ includes a the transparent inorganic fine particle component as the inorganic fine particle component.

Claim 7 (Currently Amended) The artificial stone wall material according to claim 5, wherein the artificial stone crushed into particles ~~having a size in the range of 180 µm to 9.5 mm~~ includes a luminescent material or a fluorescent material as the inorganic fine particle component.

Claim 8 (Cancelled)

Claim 9 (Currently Amended) The artificial stone wall material according to claim 1, wherein the resin component ~~in the~~ ~~at a surface of the artificial stone wall material~~ portion ~~thereof~~ is removed by dissolution with a solvent or by pressured water ~~of from a~~ water jet ~~to expose~~ and the transparent inorganic fine particle component is exposed on ~~the~~ ~~a surface portion thereof of the artificial stone wall material~~.

Claim 10 (Currently Amended) The artificial stone wall material according to claim 1, wherein the concavo-convex surface ~~having a maximum height in the range of 1 mm to 100 mm~~ is formed by ~~method of~~ casting with a reverse decoration molding followed by hot pressing, hot extrusion or hot centrifugal molding.

Claim 11 (Currently Amended) The artificial stone wall material according to claim 1, wherein a metal fitting for attaching the artificial stone wall material onto a wall surface is molded and embedded integrally at least in ~~any of the~~ ~~a~~ rear surface or a lateral side of the artificial stone wall-molded material having-a the concavo-convex surface.

Claim 12 (Previously Presented) The artificial stone wall material according to claim 2, wherein at least part of the inorganic finer particle component is a luminescent material or a fluorescent material.

Claim 13 (Currently Amended) The artificial stone wall material according to claim 2, wherein at least part of the inorganic fine particle component includes particles ~~having a size in the range of 180 µm to 9.5 mm~~, obtained by crushing an artificial stone which is manufactured by molding and solidifying a mixture of (i) the-an inorganic fine particle component having a size ~~in the~~ range of 180 µm to 9.5 mm, (ii) the-an inorganic finer particle component having a size ~~in the~~ range of less than 180 µm, and (iii) the resin component.

Claim 14 (Currently Amended) The artificial stone wall material according to claim 3, wherein at least part of the inorganic fine particle component includes particles ~~having a size in the range of 180 µm to 9.5 mm~~, obtained by crushing an artificial stone which is manufactured by molding and solidifying a mixture of (i) the-an inorganic fine particle component having a size-in-th range of 180 µm to 9.5 mm, (ii) the-an inorganic finer particle component having a size-in-the range of less than 180 µm, and (iii) the resin component.

Claim 15 (Currently Amended) The artificial stone wall material according to claim 4, wherein at least part of the inorganic fine particle component includes particles ~~having a size in the range of 180 µm to 9.5 mm~~, obtained by crushing an artificial stone which is manufactured by molding and solidifying a mixture of (i) the-an inorganic fine particle component having a size-in-the range of 180 µm to 9.5 mm, (ii) the-an inorganic finer particle component having a size-in-the range of less than 180 µm, and (iii) the resin component.

Claim 16 (Currently Amended) The artificial stone wall material according to claim 6, wherein the artificial stone crushed into particles ~~having a size in the range of 180 µm to 9.5 mm~~ includes a luminescent material or a fluorescent material as the inorganic fine particle component.

Claims 17-20 (Cancelled)
